Student Services
Center, First Floor

SIO 114 Section ID:
902493

SIO 114 and ETHN 136 Both Satisfy the Diversity, Equity and Inclusion Graduation Requirement

SIO 114/ETHN 136 is a cross-listed survey course that takes on critical issues such as environmental racism, climate change, toxic air quality, mining and decolonial struggles both past and present. Students will be introduced to the frameworks with which the relationship between society and the environment is studied using both local- and global-scale case studies - both the scientific underpinnings and critical ethnic studies discourses.

Check out the course website: <http://titicaca.ucsd.edu/sio114ethn136>

Please Note: We will take the existence of environmental injustice and its intersection with other forms of injustice as a given. This course will not be about debating whether such injustices exist, but rather about exploring their underlying mechanisms and learning from the struggles against them.
